

Construction Update: Steveston Interchange Project

Soil sampling and electrical work

August 2022

As part of the Province of B.C.'s Steveston Interchange Project, which will expand the interchange from two to five lanes, crews will perform soil sampling and electrical work.

Soil sampling is necessary to understand the existing ground conditions in preparation for construction. This activity will take place during the day in the southeast and northeast quadrants of the interchange and will begin in late August or early September. Drill equipment will be used. Traffic impacts are not anticipated, and noise impacts will be minimal.

The Project is also doing some electrical work, which will require a vehicle to be parked on the grassy area of the southwest quadrant of the interchange. This work will be performed at night, and no traffic or noise impacts are anticipated.

Throughout the duration of the Project, most notifications will be distributed by email. Please sign up for e-notifications at highway99tunnel.ca/newsletter.

If you have any questions about construction, please email StevestonProject@flatironcorp.com or call the construction information phone line (24/7) at 1-888-270-1075.

What to Expect

Timing

- > Likely starting the week of August 29, 2022 to mid-September

Hours of Work

- > Soil sampling:
Daytime from 7 a.m. to 5 p.m.
- > Electrical work:
Nighttime from 10 p.m. to 5 a.m.

Traffic

- > No anticipated traffic impacts

Impacts/Interruptions

- > Noise impacts will be minimal and similar to existing traffic noise levels
