

## Project Update: August 2025

### Steveston Interchange Project: Phase 2 girders installed as Project completion approaches.

The new five-lane Steveston Interchange Project is a key part of the Highway 99 Tunnel Program to improve travel along the Highway 99 corridor. As part of the broader Program, the interchange will integrate seamlessly with the new eight-lane immersed tube tunnel being built under the Fraser River to replace the existing George Massey Tunnel.

The Project is now approaching completion, with crews making significant progress on the Phase 2 structure.

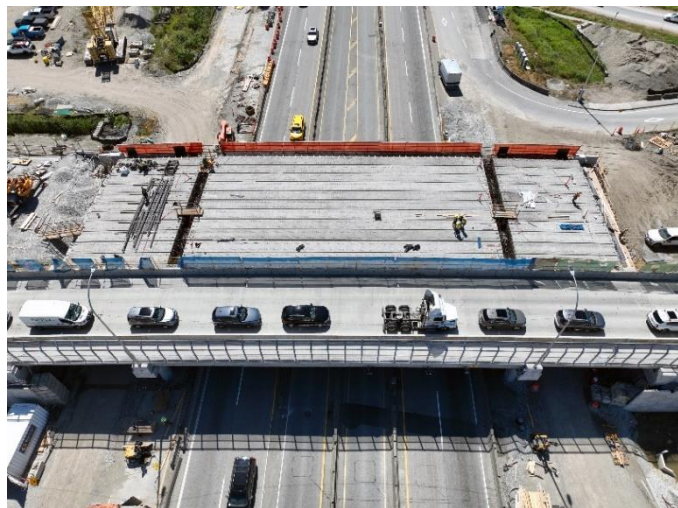

Between late July and early August, all 33 girders (concrete beams) for Phase 2 were successfully installed. Combined with the 21 girders placed during Phase 1, all overpass girders are now in place – marking a major milestone for the Project.

In order to minimize traffic impacts, crews worked overnight shifts to install the large, Phase 2 main-span girders, which stretch across Highway 99. Each main-span girder weighs 50 tonnes and is 35 metres in length. The smaller end-span girders were then installed during daytime hours without disrupting traffic.

With the girders now set, work is progressing to construct the Phase 2 bridge deck, as the Project looks ahead to completion in fall 2025.

*Project site looking southeast (August 11, 2025).*

*Phase 2 girders in place next to traffic flowing on the completed Phase 1 structure (August 11, 2025).*

It has been a year of significant progress on the Project, including:

- Switching traffic to the Phase 1 structure.
- Removing the original overpass.
- Completing Phase 2 pile driving and ground improvements.
- Constructing Phase 2 piers and pier caps.
- Building roadworks and active transportation infrastructure, including sidewalks and multi-use paths.

*Heavy-lift cranes on either side of Highway 99 hoist a main-span girder into place (July 19, 2025).*
