

Fraser River Tunnel Project

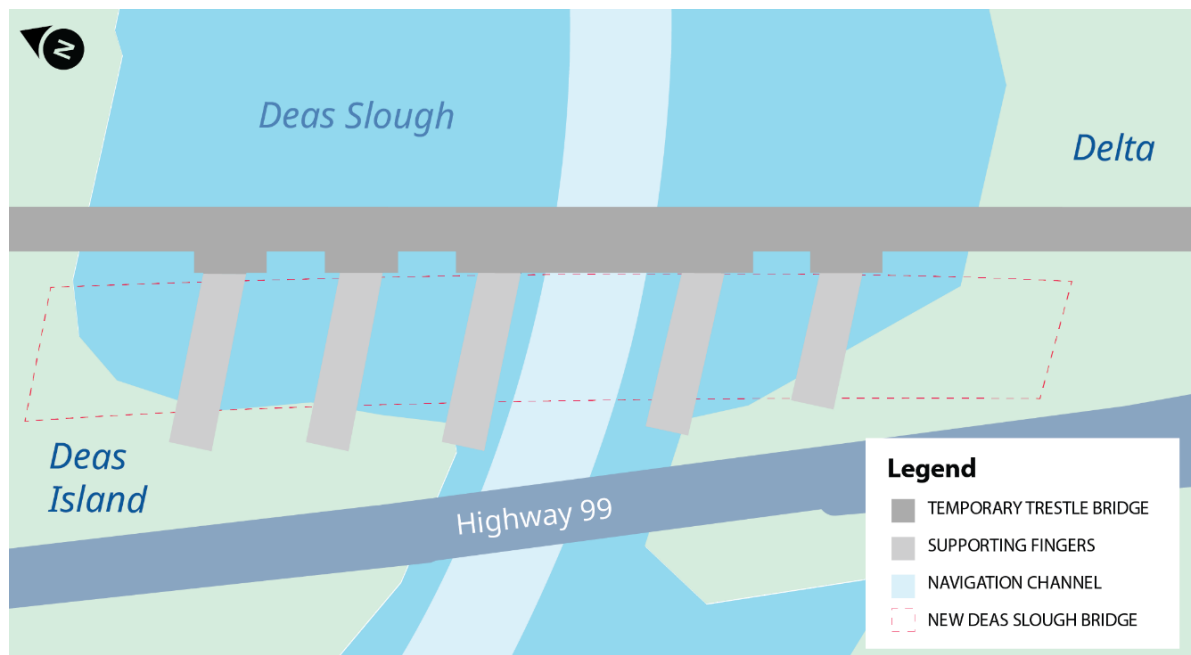

Construction of the Temporary Trestle Bridge

October 20, 2026

Work is underway on a temporary trestle bridge just east of the existing Deas Slough Bridge. The temporary trestle bridge will reduce construction impacts to Highway 99 by giving crews direct access to Deas Island. It will also support construction of the new Deas Slough Bridge. **Temporary trestle bridge construction is expected to start as early as October 23, 2026, and continue through February 2027.**

Pile driving is required to install the trestle foundations to ensure the structure can safely support construction traffic, including heavy trucks and equipment. **An increase in noise and vibration can be expected during piling for construction of the trestle bridge.**

When feasible, noise-dampening materials may be installed around the equipment to help reduce noise. Crews will use vibratory hammering as much as possible to reduce noise impacts; however, hammer piling is required to drive the foundations to their final depths.

This graphic is for illustrative purposes only – design is subject to change.
